

DISH Note

Short Mast

Audience: Technicians, FSM, IM, GM, QAS
DNS Trainers, RSP and DNS Subcontractors
Release Date: 08/09/2010

Short Mast

Benefits: Allows 1000.4 DISH to be installed without the use of struts saving time.

Usage Guidelines

The short mast is your first option when installing a 1000.4 DISH. It eliminates the need for struts and reduces the installation time and cost. A short mast can be used 85% of the time on 1000.4 DISH installs. On the remaining 15%, the short mast does not allow the same range of motion required to achieve line of site. Technicians will need to use the long mast and the required struts when the short mast cannot be used.

Identifying the Short Mast:

- Part Number/Description: 173152/ASSY, DISH 1000.4 MAST/FOOT SHORT
- Mast Thickness: 0.050"
- Foot Thickness: 0.104"
- Identifying Marking: "W4" or "J4" or lip all around foot
