## Stations

### Address Location Results

The results below were calculated based on the latitude and longitude you entered on the Address page or the location you selected on the Map page.

### Stations and Antenna Types

TV reception is determined by the size and type of antenna and the direction in which it is pointed. To determine the right antenna, use the color coded Antenna Type to select the channels that you wish to view. Antenna types are color coded according to the size and type of antenna needed for reception. The list is arranged in order of ease of reception, with the stations requiring the smallest multidirectional antenna at the top, to those requiring the largest directional antennas at the bottom.

Use the "Compass Orientation" listed below to point your antenna or rotor system for the channels you wish to receive. Please note that "Compass Orientation" is referenced to magnetic North.

The "Frequency Assignment" column is provided to facilitate custom antenna design for special circumstances.
